Fit Buddy AI – AI Fitness Plan Generator using Gemini Models

Generative AI Project | FastAPI + Google Gemini

Mariya Darshini (Team Leader), S. Harini, R. Subhashri, S. Mythili

Included project files

The GitHub-ready development package contains the FastAPI entry point (app/main.py), routes, services, models, schemas, templates, static assets, requirements, start scripts and the test files.

Run

From the development phase folder, install requirements.txt and run: `uvicorn app.main:app --reload`. On Windows the `start.ps1` or `start.bat` script does this automatically. Keep the Gemini API key in a local `.env` file.

Repository safety

The `.env` file and database files are excluded through `.gitignore`; only `.env.example` is included.
